### ***Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-10 are rejected under the judicially created doctrine of obviousness-

type double patenting as being unpatentable over claims 1-8 of U.S. Patent No.

6,688,492 in view of Ferrara, Jr. Jaworski et al. discloses all of the claimed features in claims 1-8 but lacks the details of the stem. Ferrara, Jr. shows an aerosol container for automatic timed dispensing of product having a diaphragm 60 attached to stem 68; the stem has a seal surface at its base to keep the material inside as seen in Figure 2 and an outlet at 72; and the stem provides the outer surface of a conduit 52 for discharge of propellant out of the valve. It would have been obvious to provide the stem structure as taught by Ferrara, Jr. on the device of Jaworski et al. in order to provide for a secure attachment of the diaphragm to the valve.

**Conclusion**

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Iketani shows a timed, intermittent aerosol valve; and van der Heijden shows an aerosol valve with different inlets for propellant and product.
